

## OUR “CLEAN WATER REVIVAL” STORY Gary and Bonnie Luft Woodway, Texas

In December 2013, I began to feel like our water was burning me when I showered, but I really thought I was just imagining things. How could water hurt?

A little background... In July 2013, we had received a letter in our water bill stating that, along with chlorine, the city had added “chloramines” to kill the bad bacteria. I have been diagnosed with a very rare “no cause - no cure” skin disease called “Pityriasis Rubra Pilaris (“PRP”). When my husband read the letter and the mention of “chloramines, he stated to me “I wonder if that will affect you?”. Months went by and we forgot about the letter and the mention of chloramines.

In December, we travelled to Georgia to see our daughter for Christmas and I noticed I did not have the burning sensation when showering. When we returned to Texas, I felt a burning sensation again. We immediately suspected chlorine because of the smell and installed a shower filter specifically to remove chlorine. Oh my, I got out of the shower like a burn victim and literally was in tears. After some quick research on chlorine, we remembered the letter about chloramines and the mention that those with weakened autoimmune systems, kidney dialysis, and fish aquariums needed to seek alternate water supplies. We quickly researched chloramines and discovered that it is ammonia based and the combination of chlorines and chloramines was actually burning my skin. Not only was I showering in the water, but I was drinking it, cooking with it, washing my hands, and washing clothes. It affected me in every aspect of daily life. We had to do something and do it quick!

Again, my husband began his research and this time it was on water systems. We narrowed our choice down to 1 or 2 nationally advertised companies. I had been going to an Environmental Health Center in Dallas for a month and they suggested that we also look into **Clean Water Revival**. My husband took their advice and called **Dr. Speiser**, a retired Chiropractor with a PHD in Chemistry. They were on the phone for about an hour and my husband quickly realized he had finally found a real water expert and not a salesman. We sent him copies of our water analysis that we obtained from the city and Dr. Speiser provided us with his observations. Our water had spikes of substantially higher amounts of chlorine and chloramines than it needed and he also identified the presence of an industrial chemical. That very day, we made the decision to purchase a **“Clean Water Revival System.”**

Dr. Speiser was incredibly knowledgeable and helpful. He stayed in communication with my husband over the entire process. *Dr. Speiser custom designed a filtration system to meet our critical need of removing chlorine and chloramines, but leaving the good minerals.* The system was fairly priced and included a full-house water filtration system and an under sink kitchen filtration system that removed 90% (full house) and 95% (under sink) of the chemicals respectively and left the good minerals. He guided my husband in the installation process and emphasized that the system must be properly installed by a licensed plumber. The day of the installation, Dr. Speiser was on the phone with the plumbing company to make sure it was installed correctly.

The installation was a success and the system works beautifully. We have used it for six months and have had zero problems. It works and it does what it is supposed to do... filter the water.

Oh, how wonderful it is! Water is a precious resource that we tend to take for granted each day. We now have *crystal clear water* and I can shower without getting burned. It also tastes great! Dr. Speiser still answers any questions that may arise and he definitely made a difference in our life!

Thank you, Dr. Speiser, for all of your expertise, guidance, and support through a life changing experience. "Clean Water Revival" saved my life!

Sincerely,  
Bonnie and Gary W. Luft
